

in many places enterprises as well by  
 sea as by lande, chiefly toward the south and east  
 partes. By the calimette of the aye shall be many  
 twelve houres. In one of the greatest cities shall  
 be wonderfull ioye and gladnesse, but truely so-  
 ward those partes aforesaid, shall be grate and  
 bechment heates.

*The Declaration of October.*

The newe Moone shall be the second day of  
 this moneth at one of the clock. xvi. mi-  
 nutes at after none, tempestuous wynde  
 and horrible. The Sonne being at xii. de-  
 grees of the signe of Scorpius, which shall be very  
 labor: per reasonable by reason of many houres,  
 and running waters, with some mists & thicke  
 fogs. It shall be inconstant weather until the xli.  
 of this moneth. The weather shall be very peaceable  
 by the reason of moderate and serene motions  
 of the aye. And as for terrestrial and humane  
 doings, I fynde them variable, with many adven-  
 tures, by the inclination of the planets, that no  
 tongue can expresse, or penne describe.

The first quarter shall be the x. day at ii. of the  
 clock. xvi. minutes in the morning, dyvers la-  
 ther and troublesome. The most part of this mo-  
 neth shall be of a good operatio: having some thou-  
 ses of rapine, wynde and inconstancie of weather.

in many places enterprises as well by  
 sea as by lande, chiefly toward the south and east  
 partes. By the calmnesse of the ayre shal be many  
 sweete shoures. In one of the greatest cities shal  
 be wonderfull ioye and gladnesse, but truely so  
 warde those partes aforesaid, shal be grate and  
 bechment heates.

*The Declaration of October.*

The newe Moone shal be the second day of  
 this moneth at one of the clock. xvi. m. m.  
 nutes at after none, tempestuous wynde  
 and horrible. The Sonne being at xii. de.  
 grees of the signe of Scorpius, which shal be very  
 whor: per reasonable by reason of many shoures,  
 and running waters, with some mists & thicke  
 fogs. It shal be inconstant weather until the xli.  
 of this moneth. The weather shal be very peaceable  
 by the reason of moderate and equall motions  
 of the ayre. And as for terrestrial and humane  
 doings, I fynde them variable, with many adven-  
 tures, by the inclination of the planets, that no  
 tongue can expresse, or penne describe.

The first quarter shal be the x. day at. ii. of the  
 clock. xvi. minutes in the morning, dyvers la-  
 ther and troublesome. The most part of this mo-  
 neth shal be of a good operatio: having some thou-  
 res of rapine, wynde and inconstancie of weather.

## A Prognostication

shall be a great temperature in the aire & weather. Venus promyleth unreasonable weathers, with lightnings and thunders, but it shall be for fewe daies.

The fyft quarter shall be the .x. day at .viij. of the clocke .ij. minutes in the morning, moderate and constant weather. Saturne and Venus appoynting vnto the Sunne, in the Equinodall lyne, mingling one an other, doe prognosticate rayne, cold wyndes, thicke mists: and they forsythe the disposition of the weather to be inclined more to colde than otherwise.

The full Moone shall be the .xviij. day at .x. of the clocke .xiiiij. minutes in the morning, rayne and faintlye heates. Afterward, there shall be strange mutation, as well of the constitution of the wea- ther, as of diuers people. Vnto the end of this pre- sent month, there shall be nothing but cold, frost, rayne, mists, and drouth in diuers regions.

The last quarter shall be the .xv. day at .ii. of the clocke at after none .x. minutes, rayne and fogge, cold and dawe. The cold shall begyn to be short and sharpe: but the rayne shall be troublesome, with lightning, thunders, fogges, and wyndes, mutable weather, and very inconstancie. Within the citie of this month there shall be (in great partie) from the beginning vnto the latter ende a de- monstration by the authors, of the diuersitie of wyndes.

## A Prognostication

The fluddes shall mightily increase & ouerrunne many landes and places, and therby do great hurt and damage.

The last quarter shal be the. xxij. day at. viij. of the clock. xxxv. minutes at after none, great rain, soze windes, mistes, snowes, frostes abundant and incomparable. True it is, that on the. xxix. daie of this moneth, it shall somewhat begyn to be seasoned and moderated, very mystie and foggy: but at the latter end very constant & moderate wether.

The new Moone shal be the. xxx. daie at. xi. of the clocke. xxiij. minutes in the mornynge, moderate weather, great corruptions in the ayre, and very reumatike, whiche will cause certaine vnknown sicknesses. Lette vs pray vnto God to p̄serue vs this yeare from all calamitie, and from all suche maner of diseases.

**H**ere endeth the Prognostication of the. xij. monethes for this present yeare. 1567.

## of M. Nostrodame.

the coniunction of the Sunne into Saturne, it doth signifie cloude and mystie dayes, with thunder, hayle, tempest, and whirlewynds. And toward the ende of this moneth, it shal be mixed with heate, and temperate with much constancie.

The last quarter shal be the. xxxj. day after mydnight. i. minutes, wyndie, and raynes, whote, the Sunne beyng at. xxvij minutes, and. xliij. degrees of the signe of Cancer, whiche shal be whote and drie, continually increasing with heate. Mars and Mercurius doe prognosticate some waters, and mutation of weather, the weather shal tende to some clerenesse & temperature, not without thunders and lightnyngs, and wonderfull actes of the same besides.

### *The Declaration of Iune.*

**T**he newe Moone shal be the. viij. day of this moneth at. v. of the clocke. xxviij. minutes in the morning, thunder with great heate and drynesse, wyndes shal blow, tending to great vehemencie of heate, that it shal seme to burne mens faces, and the most part of the goods of the earth, namely in Italy, Spayne, Prouence, and other partes of Languedock. Other regions drawyng to the west shal also haue many greate raynes, thunder and tempest.

The first quarter shal be the. xiiij. day at. viij. of

shall be made friends, yet neither seeing nor touching one another: although that the above sayd planets do make signification of to me one great portentate which will not permitte such an agreement to come to so good effect, though al the resolution of this moneth. I would here make a particularitie of some other point, which in doo can not be brought but to one speciall point, where as every one might be pacified: but the foresayd planet or author both prognosticate, by furious thunders, most horrible plagues, earthquakes, and other most fearful rempelles. Let us praye unto God, that such evils (as here be foretold) be turned into us) may by most speedy repentance, be turned away from us all. Amen.

## The Prediction of September.

The new yee shall be the thirde day of this moneth at 11. of the clock. xxvii. minutes in the morning, hable and thundred with small shoures, the sunne being at 1. degrees in the signe of Libra, dothe promise us gentle raimes tending to good successe: but hereafter on the 1. day being under the planetes, is signified many & divers sicknesses: and because that the yee shall be rather, it shall make contention and strife, dissention, hatred, and greave discord amongst some of the most greave. There shall be

## A Prognostication

ending more to freshnesse and youth in other weather. Mars shall be occasion of great perturbation in the ayre, with great thunders and lightnings, and much inconstant weather, being very divers for many daies.

The full moone shall be the xlii. day after the clock. try. minutes in the morning. A heroforthal be an Eclipse, with moderate and constant weather. This Eclipe shall be inclined to cold and drynesse with winde, raine, and fogges, which shall continuee reumes, and other sicknesses, namely many long quartene agues, in such sort, that many shall seme rather to dye than to lyeue. The Eclipses shall be more in so greete trouble, as they are like to be, and that for a long tyme. Venus & Mercurius shall be very troublesome, and the other, very difficult to passe. The wayes shall be founde greatly difficult. The signes of plague to be at the ende of this moneth, shall be altogether banished awaye. But the preparations of other long sicknesses is at hand, which shall make people (willingly) to thow them selues both in fire and in water. Iupiter both againe prodigiously, that we shall have the weather obscure and darke, but not so bebenient as the astrologer shall be: and that toward the end of the moneth, by the meanes of the malignant quadrature of Saturne, it shall

## A Prognostication

the clocke. xxiij. minutes at after noone, weather rainy, entermingled with Triplicite aquati, that shall make to appeare in the element thorough the drynesse of the Spryng tyme certaine beastes, as caterpillers of the one side, and on the other side Locustes and Grasschoppers, that shall doe great harme. Many Forrestes shall be leste without greene leaues: there shall be nothing but flaming heates, whiche will cause continuall Feuers, deprivation of witte, much fransnesse: and diuers other sicknesses. Lette vs pray vnto the omnipotent God to preserve vs from all these evils.

The full Moone shall be the xxi. day after mydnight. xxix. minutes: the weather very constant & moderate, but shall not long continue. After this, through great variation of the tyme, towarde the west countrey the mistses shall be but of smal continuance, and then the weather shall be altogether moderate.

The last quarter shall be the xxix. day at .iiij. of the clocke at after noone, whote, rayne, and great heates and drynesse, the Sunne beyng at .xii. degrees in the signe of Leo, that shall be whote and drye, with whote wyndes, beyng somewhat westerly, by the resolution of the Planets, redounding til the Spryng time shall passe. The constitution of the tyme shall be altogether lyke, without any difference, and the Sunne shall little diminish  
the

## of M. Noſtrodame.

### *The Prediction of December.*

**T**he first quarter ſhal be the .viij. day of this moneth at .vj. of the clocke. xlvij. minutes at after none, tyme mutable and inconstant, tending vnto a very euill weather, ſnowe, raine, froſte, and all manner of impetuofitie, of that, that is concerned in the ayre, and it ſhall be as halfe an eſtuation, that ſhall be greatly hurtfull and noyſome. A little further it ſhall be a greate deale moze moderate and ſeaſonable, but in all this quarter ſhall be rayne and winde, weather very troubleſome. The moſt part of enimities and quarels ſhall be appeaſed and paciſied, which ſhal be an occaſion of great reioyryng amongſt the people. And they ſhall bee deliuered from captiuitie and wicked ſuperſtition. The ſickenesses ſhal be ſomewhat moze moderate & conſtant, than heretofore in this ycare, meaning the grace of God.

The full Moone ſhal be the .xviij. day at .v. of the clocke. xxi. minutes in the morning, conſtante and moderate weather, but it ſhall not long continue, but rather return to his former malignitie: as colde ſnow, wynd, froſtes, rayn, not without ſome ſuch token or ſigne, as heretofore hath not bene ſcene.

Within this moneth ſhall bee (what by thunders and other inconuenient ſeaſons) quaterne agues, coughes, pleureſies, the grauell and ſtone, namely to the aged. The raines ſhall be very troubleſom.

The

not be good to be lette blood, neither yet to take  
bathes, because the sicknesses that are to come,  
might be prevented.

The first quarter shall be the 15. day at foure  
of the clock, by minutes in the morning, cold,  
windie, and dyle, with frostes. And as for the con-  
dition, it shall be of the same temperature. And  
because that the planets towards the ende of this  
moneth, do declare things truly to come to passe,  
they deserve praise. Where shall be (say they) a dark-  
nesse upon the earth, dangerous winds, haies of  
fye, great raynes, and stormy weather, inclined  
to catthartes, tozelle of y stomache, inflammation  
of the plagues, and other kynde of todayne death.

## The Prediction of November.

The new ynone shall be the first day of this  
moneth at 4. of the clock, by minutes in  
the morning, myde weather and trou-

blesome with snow, the Sunne being at  
1. degrees in the signe of Sagittarius, by the which  
there shall mydes, winds, and raine appeare, very  
inconstant and of great variation. The cold shall  
begin to be very sharpe, but chylde towards the  
mydes. And because that Jupiter and Mars doe  
loose the demeritally, that that is of the last con-  
junction, is an ample signification of some greave  
corruption of the ayre, seming rather present, than  
to come.

# A Prognostication

that be great, and of euill effected.

The full moon shall be the .xv. day at .vi. of the  
 cloche. lxx. minutes after noon, moderate wea-  
 ther, with litle heat. The Sommer shall be of mite-  
 le temperature, beginning somewhat to decline.  
 But the planets shall retorne agayne, and moue  
 them selues abundantly, until the end of this mo-  
 neth: so that by this meane, one moneth shall (in  
 properties) succede an other. The trees shall be litle  
 bare, and without leaues. The fruites that shall be  
 to be gathered, shall not continue long in theyr  
 goodnes. Agayne, though soeapn rayne that shall  
 fall, come that be greatly endamaged: so that it  
 shall turne to the great losse of the people. More-  
 ouer Mars commeth on the other syde, and thirt-

net, being moued in his clydes, as well by sea-  
 as by land: although that by the two other shall be  
 great emotions, soapn, and fearful: in such sort  
 that that which was stayed, in this moneth shall  
 come to butt out of his nest.

The last quarter shall be the .xv. day at one  
 of the cloche. x. minutes at after noon, weather  
 cold and dry, effeual to many kynde of diseases,  
 peale to laundie, quaterne agues, and other more.  
 The celestiall appearance both for the sun, moone,  
 tion of time, but it shall not be without much  
 trouble, from the end of this moneth unto the .x.  
 of the other. Some great pestilences (being enemies)

## A Prognostication

with instruments. The daunger vpon the sea shal somewhat be appeased.

The new Moone shal bee the last day at .v. of the clock. xxxiiij. minutes at after noone, thicke mists and harde frost. The Sunne beyng at. r. degrees. xxvij. minutes in the signe of Capricornus demonstrateth, to be a litle seasond with moderation of weather, vntill the fyrst quarter of the next moneth folowynge: and that throughe the malignant aspectes, which be of a perfect enimitie, and manifested by certayne bayne enterpryses of some, beyng imprudent. In this present moneth, the disposition of sicknesses, the ayre shal be very cloudey and colde, and of an extreme humiditie: and then sodainly all drouthe. And by reason that within a while after, Saturne not lengthning him self farre from the Moone, commynge to the opposition of the Sunne, shal cause great damage, by vehemencie of wyndes, byngynge with them frostes, snowes, yee, raine, mists, and al other diuersitie of yll weather. Saturne and the Sunne, notwithstanding the force of their oppositions throughout all the moneth, forshewe nothing but ioy and gladnesse. Many of high estates shal be gathered together, & there shal be coniunctions and coucnantes made an ende of. Greate number of sicknesses, feame, reumes infinite: also catharres, and distillation of vyne, and other euill diseases very inconstant and dangerous. Let vs pray to God to preserue vs all. Amen.

## of M. Noſtrodame.

the coniunction of the Sunne in Iupiter, whiche ſhal be the occaſion of ſome wind. But truly there ſhal be great thunders and horrible tempeſts, with hayle that ſhall fall. The ayre ſhal become ſo darke and obſcure, that it ſhall ſeeme altogether blacke, as it were nyght, ſoꝛ a certayne time and ſpace.

### *The Declaration of Iuly.*

**T**he nexte Moone ſhal be the .vi. day of this moneth. lb. minu. after mydnight, thunders and lightnings, with gret tempeſts. An vniuerſall conſtitution of the yeare is here Comprised with diuers other agreeementes. For the coniunction of this yere prognosticateth, bycause it is a ſigne of furie and vnnaturall, that all manner of feedyng flockes ſhall ſuffer through mortalitie and other inconueniences. The rayne ſhall greatly abounde, & there ſhal not be ſo much increaſe as it ſhall ſeeme to appere vpon the earth: but of all maner of oyle great abundance.

The fyrſt quarter ſhalbe the .xiiij. day at .tiij. of the clocke. .xxii. minutes in the moꝛnyng, the weather freſhe, conſtant, and moderate, by reaſon that the Dogge dayes ſhal be ſuperiours. There ſhalbe a mutation of weather: ſoꝛ at the dayes of theyꝛ enttie, there ſhal be great change of cold, and ſhall be the generall occaſion of dyuers kynde of conti-

that carter the be able to open the mount  
 by people, taking them in the thore and nere,  
 love. There the alarfe many cathars, which  
 greave, not without create butte and  
 that shall come to knowlege. The goodes shall  
 saue, the bloudy fire. There the be much murther  
 byng sette in the body, great aches in the ray,  
 aches in the loes, pecting of bloud, impedimentes  
 as vomiting of bloud, ardent aches, great  
 in the court of this quarter, shall receive many  
 sunne and of the same, withholden from them.

shall have no skill therein, byng both loopye and  
 sicknesses shall be of such strangeness, that many  
 hoppers, and divers other kind of vermines. The  
 would have hapned, as women, caterpillers, gral  
 moneth shall destroy the corrupt putrifaction, that  
 diuinitie of weather very euill. The malice of this  
 shall be frores, winds, now, mites, and other

## A Prognostication

long sickness, whiche shall long endure.

The full moon shall be the .xv. day at .iii. of the clocke .i. minutes in the morning wnder, halle, thunders, very tempestuous: also sicknesses and diseases shall be augmented in the same time. The ende of this moneth shall be very rapine: then in a short time the heare shall augment. Againe, there shall be thunder and lightning, halle and tempest, weather contagious and very inconstant for the space of many daies.

The last quarter shall be the .xv. day at .iii. of

the clocke .x. minutes in the morning, abundance of heare, being peruerle: but by all other planets it appereth not to be very good, the weather shall so frequently be inflamed, that al shall come to dry up at once. But bicause that the moon both lengthen

her selfe from the Sunne, tending to the full, it both foreshew some daies to be somewhat cold:

througħ impetuous thours of rapine there shall be

thunders and tempest toward Italy, and the most

part of Spayne. There shall be certaine sicknesses of

plagues: and some shall sodainly be depriued both

of wit and sense at once: others shall ouerwhelme

them selves, other thow downe them selves out

of windows: some other, downe them selves in

well, in rivers, and in riches: there shall be many

murthers & robberies both in cities & by wayes,

## A Prognostication

to come, which shal be by raine and snow, plagues and other diseases. And bicause that in the diame-  
trall conjunction, Fortune is constituted in tem-  
perate signes.

The first quarter shal be the. viij. day at .x. of the  
clocke. liiii. minutes at after noone, rainie wether  
and windie, beyng exempted of the most parte of  
all cold and dygnesse. This moderation of wether  
shalbe sone past, conuerting it selfe to frost and  
dye, snowe and yce, fogges, and other kynde of  
malignant wether, & some snow shall begin to fal  
the .xix. day of this moneth. The moste parte of  
the wether doth prognosticate more dygnesse than  
colde. The constraintes that appeare amongst  
those (whereof Mercurius shall haue domination)  
shall haue great power. Iupiter doth foreshewe by  
his naturall qualities, mistes, snowes, frostes and  
diuers wethers, inclined to many malignant sick-  
nesses of catharres, and sodayne Apoplexies in  
the throte, scaldyng heates, distillation of the rai-  
nes, vpon the stomacke, vpon the kydneyes, vpon  
the brest, and vpon the tongue, whiche wyl be  
very dangerous.

The full Moone shal be the .xviij. day at. liij. of the  
clocke. xxxi. minutes at after noone, very constant  
and moderate weather, yet some rayne. The signe  
of Mercurius doth prognosticate health amongst  
people: The cold shall ware more and more: there  
shal be

depend absolution. Cases shall be committed as well by a barbarous hande, as by a Latine : and all this to be moſte in this moneth, as it is to be ſcene by the demonstration of the authors.

*The Declaration of August.*

**T**he new Moone shall be the .iiij. day of this moneth at .viij. of the clocke .xxxix. minutes at after noone, the weather moderate and fayre, the Sunne beyng at .xv. degrees in the Signe of Virgo, whiche will make it (for certayn dayes) raynie and windie. This new Moone shall be vnto the last quarter very whote : and the latter end thereof shall be foggie and ful of shoures, inconstante, with hayle, winde, colde, thunder, and lightning. Here shall be great wyndes, partly south, partly west : and the vncōstantnesse of the weather will be suche, that it shall not be much to be lyked. The planets doe here foreshewe, that children of .vi. yeares old (but specially of the woman kynde,) and yong folkes shall be sore bysited. There shall be pernicious windes, which shall do great hurte. Let vs pray vnto GOD to defend vs from all aduersitie.

The fyrst quarter shall be the .xi. daye at .iiij. of the clocke .xxviiij. minutes after noone, weather inconstant and windy, with lightnyngs very dangerous : the course of many sicknesse and diseases
